

Responsive. Responsible. Buildings Reimagined.

Every building is an indoor ecosystem. And that ecosystem can affect our safety, wellness and comfort. That's why it has to be its healthiest and most efficient.

Abound helps buildings meet that responsibility by fully reimagining what they can be:

Smarter, more sustainable and more responsive.

MEET ABOUND

The smart platform for healthy & efficient buildings

Abound is a cloud-native platform that gathers performance data from disparate systems, sensors and sources, and presents it in a smart, simple interface — so you can make quick assessments and confident decisions that improve occupant wellness.

Displaying your building's health as a dynamic benchmark, Abound shows how you measure up to certification standards like the WELL Building Standard™.

The Abound Advantage

See Data Clearly

Abound gives you a clear view of your building systems and sensor performance data, in one easy interface.

Resolve Issues Quickly

Abound inspects system and sensor information to identify anomalies — enabling you to address issues more proactively.

Optimize Performance

Abound unites building data to identify strategies that achieve a balance between building health and efficiency.

The Offering

Property & Facility Manager Interface

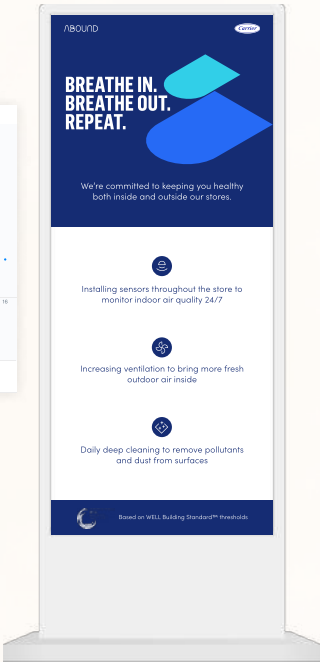

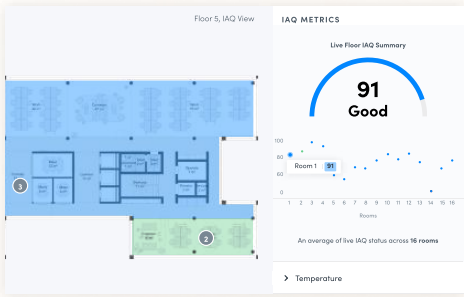

A single, integrated digital interface for monitoring building health, safety and performance data within a single property or across a portfolio

Occupant Experience

Templated display designs to market healthy building strategies

An API to display building health data in existing experiences (e.g. occupant app or digital displays)

Live Indoor Air Quality Summary

Real-time benchmarking tool that tracks building health against key air quality metrics and thermal conditions metrics, based on the WELL Building Standard™

Hardware

Carrier Edge for data collection and transmission to the cloud

Sensors to enrich BAS data (e.g. IAQ, occupancy, traffic flow, IEQ)

Support

- Intake and consultation
- Installation and commissioning
- Setup and onboarding
- Ongoing Service

Key Features

Air Quality Monitoring

View real-time and historical indoor air quality information, including temperature, humidity, CO2, VOCs, PM2.5 and radon — and receive alerts if levels move outside of a healthy range

Equipment Monitoring

View real-time and historical data for critical building systems, including chillers, DOAS, AHUs and boilers

People Counting

View real-time and historical occupancy data for individual spaces or an entire building

Energy Usage Monitoring

View real-time and historical electric load for your entire building or individual sub-systems (e.g., HVAC, lighting, network)

Live Indoor Air Quality Summary

View a real-time summary that compares your building's indoor air quality performance to certification standards such as the WELL Building Standard™

Constant Additions

We're constantly innovating and adding new features to respond to customer needs. Talk to your Abound support representative to learn more about what's next on the roadmap.
